Special Called Joint Meeting of the Electric Utility and Resource Management Commissions

March 8, 2021

The Joint Electric Utility and Resource Management Commission meeting is to be held March 8, 2021 with Social Distancing Modifications

Public comment will be allowed via telephone; no in-person input will be allowed. **All speakers must register in advance of Sunday, March 7 by Noon.** All public comment will occur at the beginning of the meeting.

To speak remotely at the **Joint Electric Utility and Resource Management Commission** meeting, members of the public must:

- Call or email the board liaison at **512-322-6505** or Natasha.Goodwin@austinenergy.com no later than noon, Sunday, March 7. The information required is the **speaker name, the telephone number they will use to call into the meeting, and their email address** (so that the dial-in info may be provided). If speaking on a specific item, residents must indicate the **item number(s) they wish to speak on and whether they are for/against/neutral**. Speakers on any topic that is not a posted agenda item will be limited to the first 10.
- Once a request to speak has been made to the board liaison, the information to call on the day of the scheduled meeting will be provided either by email or phone call.
- Speakers must call in at least 15 minutes prior to meeting start in order to speak, late callers will not be accepted and will not be able to speak.
- Speakers will be placed in a queue until their time to speak; each speaker will have up to three minutes to speak.
- Handouts or other information may be emailed to Natasha.Goodwin@austinenergy.com by noon the day before the scheduled meeting. This information will be provided to Board and Commission members in advance of the meeting.
- If this meeting is broadcast live, residents may watch the meeting here:
<http://www.austintexas.gov/page/watch-atxn-live>

The City of Austin is committed to compliance with the American with Disabilities Act. Reasonable modifications and equal access to communications will be provided upon request. Meeting locations are planned with wheelchair access. If requiring Sign Language Interpreters or alternative formats, please call (512) 322-6450 at least 48 hours before the meeting date. TTY users route through Relay Texas at 711. For more information, please call (512) 322-6505.

Reunión del **Electric Utility and Resource Management Commissions**

FECHA de la reunion (8 de Marzo 2021)

La junta se llevará con modificaciones de distanciamiento social

Se permitirán comentarios públicos por teléfono; no se permitirá ninguna entrada en persona. Todos los oradores deben registrarse con anticipación (7 de Marzo antes del mediodía). Todos los comentarios públicos se producirán al comienzo de la reunión.

Para hablar de forma remota en la reunión, los miembros del público deben:

- Llame o envíe un correo electrónico al enlace de la junta en **512-322-6505 or Natasha.Goodwin@austinenergy.com** a más tardar al mediodía (el día antes de la reunión). La información requerida es el nombre del orador, los números de artículo sobre los que desean hablar, si están a favor / en contra / neutrales, y un número de teléfono o dirección de correo electrónico.
- Una vez que se haya llamado o enviado por correo electrónico una solicitud para hablar al enlace de la junta, los residentes recibirán un correo electrónico o una llamada telefónica con el número de teléfono para llamar el día de la reunión programada.
- Los oradores deben llamar al menos 15 minutos antes del inicio de la reunión para poder hablar, no se aceptarán personas que llamen tarde y no podrán hablar.
- Los oradores se colocarán en una fila hasta que llegue el momento de hablar.
- Los folletos u otra información pueden enviarse por correo electrónico a **Natasha.Goodwin@austinenergy.com** antes del mediodía del día anterior a la reunión programada. Esta información se proporcionará a los miembros de la Junta y la Comisión antes de la reunión.
- Si esta reunión se transmite en vivo, los residentes pueden ver la reunión aquí: <http://www.austintexas.gov/page/watch-atxn-live>

Unprecedented Winter Weather Event in Texas Strains Electric Grid

February 11-21

Sidney Jackson

Deputy General Manager and Chief Operating Officer

100-Year Storm Event

Emergency Preparedness and Response

Incident Command

Austin Energy's Incident Command has been operational since COVID-19 and pivoted to winter storm mode for this event. Crews were sequestered during the event.

Distribution Crews

Dozens of distribution crews were sequestered and worked through ice and snow to restore power.

Customer Care

The Utility Contact Center fielded thousands of calls during the winter storm. They were able to provide information to customers and help them with questions regarding outages.

Vegetation Impact to Power Lines

- Polar Vortex event combined with multiple winter ice, snow and windstorms that crossed the area Feb. 11-18
- Ice accumulation increased during the events and weighed down limbs and overhanging power lines.
- Falling trees, falling limbs and tree contact occurred during the entire period from Feb 11-18. This resulted in damage to active feeders and just-restored feeders as well as feeders out for load shed.
- Frozen lines and vegetation created hazardous working conditions and contributed to increased restoration times

Austin Energy prepared for extreme cold weather; tips for customers to stay warm

February 11, 2021

Austin Energy is prepared for extreme weather events all year long. With severe cold and possible snow and ice headed to our service area, the utility is ready to respond in the event of power outages. The utility supplies safe, affordable, reliable power to our customers every day, but power outages do occasionally happen. One out of three outages in our area are caused by vegetation and weather. During windy and stormy weather, heavy ice and snow can cause tree limbs to break and sway, rubbing against or hitting power lines. This can cause service fluctuations and widespread outages.

Restoring power is more than just flipping a switch. You may see line workers, forestry crews and trucks in your neighborhood, but employees throughout the utility are also working 24/7 to safely restore power. Our first priority is to keep our crews and customers safe so be aware that weather and other hazards may slow down the power restoration process.

We encourage Austin Energy customers to be prepared for power outages by signing up for our text Outage Alerts and checking our mobile-friendly outage map at outagemap.austinenenergy.com. Customers can also report outages at 512-322-6100.

Other ways customers can be prepared and stay safe during a winter storm:

- Keep cellphones charged and backup chargers fully charged.
- If working or learning at home, save your work periodically and make sure your devices are on power strips. Using a power strip helps protect electronic device in case of a power outage. Consider using external power sources for your electronics.
- Assemble a storm preparation kit with flashlights, fresh batteries, snacks, water, and other necessities. Make sure everyone in your home knows where to find it.
- Keep your refrigerator and freezer doors closed, if possible. Food will stay good up to four hours.
- Do not drive over or go near a downed power line, it could be energized. Call 311 if you see a downed line to report it. If the line is sparking, call 911.

Communications – Energy Emergency Alert, Feb. 15

⚠ Rotating outages are starting! ⚠

ERCOT has declared an Energy Emergency Alert (EEA) Level 3. Austin Energy, along with utilities across the state, have been instructed to begin rotating outages because there is not enough power available to keep up with consumer demand.

1:25 AM · Feb 15, 2021 · Twitter Web App

Social media: Feb. 15, 2021

Due to record electric demand, Texas electric grid operator is directing rotating outages to protect electric grid reliability.

Outages typically 40 mins or less. Length and frequency depend on severity of event. Prepare for possible power interruptions due to mandated rotating outages.

Austin Energy prepared for extreme weather and continued restoration efforts

February 14, 2021

Austin Energy knows being without power is a big deal. When you rely on something as much as electricity, it can be unnerving when your power goes out. So, what should you do?

- Find more information about Austin Energy's current outages on the [Austin Energy Outage Map](#) and enter your address into the search bar at the top of the page.
- Customers with questions about their outage status, or who want to report an outage, can call 512-322-9100.

Austin Energy knows our customers are counting on us to restore power during extreme weather events like the winter storm we're currently experiencing. As of Sunday, Feb. 14, 2021, at 11 a.m., fewer than 200 customers are without power with four remaining active outages. At our peak, we had almost 50,000 customers without power. Since last Thursday, the average amount of time customers were without power was about three hours.

Thank you to Austin Energy customers for your patience as our crews work around the clock to ensure everyone's power is restored. Although most Austin Energy customers have power restored right now, we are still seeing outages occur because of ice accumulation on trees. It's important to know this is an ongoing event and outages may continue due to current conditions or worsen as additional severe weather moves into the area.

For customers experiencing longer outages, lights, electronics and thermostats left on prior to the issue can overload a circuit when the power is restored. This is called cold load pickup and may cause a second outage on that circuit. You and your neighbors can help us avoid cold load pickup by:

- Lowering your thermostat.
- Turning off or unplugging any fixtures or appliances.

UPDATE: What you need to know about Austin Energy's outage situation

February 15, 2021

Why Some Customers Have Power

Because Austin Energy was mandated by ERCOT to shed so much load to help reduce demand, non-critical load circuits are without power. The parts of our service area experiencing outages are based on the status of the circuit they're on. Areas with power likely share a circuit with a critical load circuit. Critical load circuits include hospitals, control centers, 911, the airport and water/wastewater plants and are not subject to outages.

Why We Can't Rotate Outages

The large amount of electricity demand we've had to reduce has impacted our ability to rotate outages among customers and some of our customers have been without power since early Monday morning. In normal emergencies, we rotate outages throughout our service area. Unfortunately, we are unable to rotate outages at this time because there are no other available non-critical load circuits to put into outage rotation. The bottom line is that electric load must be reduced statewide in order to fully restore service across the ERCOT grid, and Austin Energy is following ERCOT's direction.

Record Energy Use Across Texas

This emergency stems from the ongoing, prolonged and widespread frigid weather occurring across the state. This is causing the state-wide electric system — managed by ERCOT — to be strained by high demand and low operating reserves. Operating reserves are low when the capacity of available resources, such as power plants, only slightly exceeds anticipated customer demand across the ERCOT system.

An emergency can also be caused by a sudden drop in generation, due to one or more sudden and unplanned power plant outages caused by extreme weather such as a severe freeze.

When Power Will be Restored

ERCOT has stated outages may last through tomorrow afternoon. ERCOT will let utilities, including Austin Energy, know when we can start restoring power to customers. We will follow their guidance and will operate safely to restore as many customers as we can, being mindful of outage duration.

However, this is an ongoing weather emergency. The ice and road conditions are still a factor and the safety of our crews and customers is top of mind.

MEMORANDUM

TO: Mayor and Council Members
CC: Spencer Cronk, City Manager
FROM: Jackie A. Sargent, General Manager
DATE: February 14, 2021
SUBJECT: Austin Energy's Restoration / Electric Grid Emergency Proc

MEMORANDUM

TO: Mayor and Council Members
CC: Spencer Cronk, City Manager
FROM: Jackie A. Sargent, General Manager
DATE: February 15, 2021
SUBJECT: ERCOT Grid Emergency

This memo provides an update about our ongoing weather conditions and prepare our system, and crews are working as quickly as possible.

As of noon Sunday, February 14, more than 12 power. We continue to work existing outages and 12 vegetation management crews in working day and night in sub-freezing temperatures. Please keep them in your thoughts. Energy Control Center staff and other personnel that our system is stable and responses are being made.

The Austin-Travis County area is experiencing power outages. Although most customers have power restored, some are still without power. Most storms are discrete events that pass through. What we are currently experiencing with repeated outages often affecting the same areas or worsening as additional severe weather conditions can cause frozen power lines and trees causing outages. We continue to move forward with tree pruning in preparation for future storms.

Below are photos showing our restoration crews as they move through thick ice and snow.

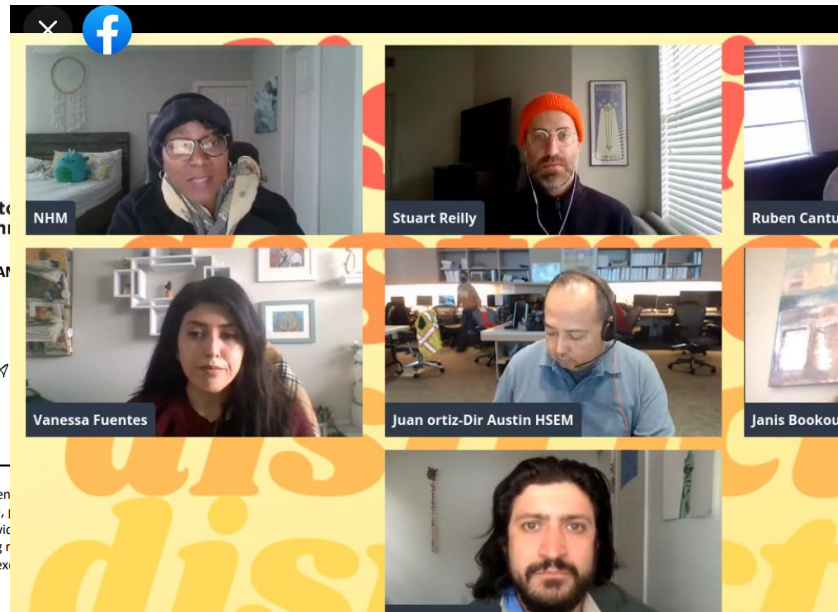

The purpose of this memo is to inform you of the emergency. This emergency stems from the extreme weather conditions occurring across the state. This is causing the state-wide electric grid to operate at or near capacity. Operating at or near capacity, such as power plants, does not ensure the system by the required amount.

Early this morning, the Electric Reliability Council of Texas (ERCOT) declared an Energy Emergency Alert (EEA) Level 1. This was soon followed by a declaration of EEA Level 3, which required utilities across the grid to begin rotating outages to shed load due to a lack of power available to keep up with customer demand.

Rotating outages are typically short-term interruptions of electrical service implemented by utilities when it is necessary for ERCOT to reduce demand on the system. As is Austin Energy's standard procedure, leading up to the event, we communicated that rotating outages could be coming and they are typically limited to 10 to 40 minutes at a time — but may last longer depending on the severity of the event.

While Austin Energy, like other utilities, had anticipated the possibility of rotating outages due to weather conditions, we had not expected the immense strain on the electric grid that would require such a massive load shedding event. In addition, the large quantity of load shed ERCOT required of utilities increased rapidly.

As Austin Energy began deploying rotating outages, the amount of ERCOT-required load shed rapidly reached Austin Energy's maximum capability. Many electric circuits in our service area contain critical loads, such as hospitals and emergency responders, which rotating outages avoid. This means that only circuits available for rotating outages are those without critical loads. Because the quantity of ERCOT's load shed was so extraordinary, its requirements took up every non-critical electric circuit available. This is why the outages were not rotated. There are no remaining circuits to rotate the load.

Good afternoon Mayor and Council Members,

Austin Energy staff and crews continue to work towards safely providing full power restoration for all customers. In order to assist with some of the questions offices are receiving, here are some updates and information that may be helpful for you to use in your updates, or other messaging, to residents.

CUSTOMER BILLING UPDATE:

Reports regarding potential bill spikes for non-Austin Energy customers are circulating and we want to make sure our customers have the most accurate information.

Our rates are fixed and must be authorized by Austin City Council.

Residential customers are billed for their actual energy usage at the current rate. Anyone without power during this time period had no electric use recorded during outage events.

We don't yet know the full financial impact of the winter storm, but it may affect the Power Supply Adjustment, which covers fuel costs for power plants, cost to provide power, dollar for dollar. When we have a better understanding of the financial effects of this event, we will go to the Austin City Council with any necessary recommendations to reduce the impact of this emergency on our customers.

Full Statement: <https://austinenrgy.com/ae/about/news/news-releases/2021/austin-energy-customers-should-not-expect-to-see-massive-electric-bills-as-result-of-winter-storm>

POWER RESTORATION EFFORTS CONTINUE:

Austin Energy has made outstanding progress on getting households back online. As of 4 p.m. today, we have fewer than 2,000 households without power and more than 99.6% of customers have power.

Of those still without power, we have become aware of issues hampering our efforts to bring the power back on for some apartment complexes. One of the main issues is cold load pickup at these buildings. When the power is turned back on, if the demand for energy is high, it can cause a circuit to trip again.

We're advising apartment residents and management without power to please:

- Turn off high-energy use items.
- Don't rapidly heat your home, set it at 68 or even lower.

Council Member Alison Alter @ALTERforATX · Feb 20

My office has received concerns about exorbitant Austin Energy bills. @austinenrgy sent out the press release linked below assuring customers that they should NOT expect to see massive electric bills as result of winter storm.

Austin Energy customers should not expect to see massive electric bills as result of winter storm

Austin Energy provides stable, affordable electric rates to all its customers. We are aware of media reports regarding potential massive electric bills for non-Austin Energy customers and want to stress to our customers that Austin Energy will not benefit financially in any way from this winter storm event.

The customers impacted by major bill spikes are seeing electric rates controlled by variable price billing and are therefore vulnerable to sudden price swings from the wholesale energy market, both increases and decreases. In contrast, Austin Energy's base rates are fixed and any changes must be authorized by Austin City Council.

AE customers will not see massive electric bills from winter storm
